

## **LOCAL WATER RESTRICTION**

### **TOWNSHIP OF SCHREIBER**

**With the coming summer hot weather, excessive lawn watering will put a strain on the Township of Schreiber's water production capabilities at the water treatment plant.**

**At this time we are asking for your cooperation in using alternate day lawn watering where even numbered houses water on even numbered days and odd numbered houses water on odd numbered days.**

**Your cooperation in this matter is greatly appreciated.**

**For further information, please call Mitch McLaughlin, By-law Enforcement Officer at 824-2711 ext. 227.**

**Thank you - Public Works Department**

---

#### **Tips for effective lawn watering:**

- **Do your lawn watering early in the morning or late evening. Watering in the afternoon will only see most of your water evaporate in the hot sun.**
- **Water deeply and infrequently. Deep watering promotes a deep root system while over-watering (daily) promotes shallow root growth, making your lawn less hardy.**
- **Water an area of your lawn for 15-20 minutes before moving your sprinkler to a new area.**
